# Do You Have Complete Visibility into Your MRO Master Data and Processes?

## Net Results Group's advanced MRO professional services are complemented by a technology suite that helps you manage and monitor a wide range of MRO master data components.

MRO3i™ combines core capabilities to house and manage MRO master data in a fully supported cloud-based technology suite, covering MRO Materials, Equipment/Assets, BOM, Inventory and Vendor Master Data.

MRO3i supports complete workflow management for master data and includes:

| | |
|---|---|
| Data Governance Module | Interfaces to any EAM/ERP or CMMS host system |
| Data Dictionary Module | Supports the standardization of MRO Material Master Data |
| MRO Material Master Data | Manages Dictionary, Material Master Records and Manufacturer Information |
| MRO Inventory Module | Captures storeroom Information (quantities, min/max, bin location, etc.) |
| Equipment/Asset Module | Captures asset hierarchies complete with in-depth asset information, blue prints, P&IDs, and warranty information |
| Bill of Material (BOM) Module | Enables fast and accurate association of parts to equipment and location |
| Walkdown Tablet Module | Enables fast and accurate identification of MRO Material items, description enrichment, association to stocking locations, condition status, handling & storage practices and disposition tagging. Also supports equipment/asset walkdown for physical data collection/validation |
| Vendor Module | Captures key supplier/vendor information (name, part number, etc.) |

Developed with responsive web design technology, MRO3i performs on any PC, tablet or mobile device. It's fully supported by Net Results Group and does not require any customer IT support. MRO3i can be utilized as a self-service tool for data transformation and ongoing data governance.

### Customer Testimonial

*"Our indirect item master had many issues. Bad data quality caused us to lose productivity and experience higher inventory values. Net Results Group's solutions helped us get back on the right track with better standards and methods for cleansing data, and they created a more efficient process to ensure we maintain the quality of our MRO data using their MRO3i tool for ongoing data governance. MRO3i is intuitive and easy to use."*
